The watch will prompt you "It's time to drink water." at the planned drinking time. The water reminder function can be set in the app.

**Note:**  
The waterproof is only for non-underwater life scenarios. Swimming, diving, boating, sauna etc do not meet the warranty terms.

9

### Specifications

- Screen size: 1.43-inch AMOLED
- Battery capacity: 280mAh
- Working time :7-9 Days
- Waterproof rating: IP68

**System Requirements**  
Android : ≥5.0 version  
IOS: >9.0 version  
HarmonyOS: >4.0 version

#### Q&A

**Why does the blood pressure value deviate from the blood pressure monitor?**  
The deviation in the measurement values of watches and blood pressure monitors is determined by various factors. The measurement site of blood pressure monitors is in the brachial artery, while the measurement site of watches is in the two main branches of the arterioles. Under normal circumstances, the measurement values of aortic blood pressure and arteriole blood pressure will differ by 30 to 40 mmHg; If you use a watch and a sphygmomanometer to measure simultaneously, due to the centrifugal direction of blood flowing in the arteries, the strap on the sphygmomanometer during measurement puts pressure on the area below the center of your elbow, temporarily preventing smooth blood flow to the arterial branches below; An increase in vascular tension will result in greater deviation in upper and lower blood pressure measurements.

10

### Q&A

#### Why can't I wear a watch to take a hot shower?

The temperature of shower water is relatively high, which generates a lot of water vapor. Moreover, water vapor is in the gas phase and has a small molecular radius, making it easy to penetrate through the gaps in the watch casing. When the temperature drops, it will condense back into liquid droplets, which can easily cause short circuits in the watch's internal circuit, damage the watch's circuit board, and ultimately damage the watch.

**Why can't the watch receive message push notifications?**  
Android phone settings:  
1. Confirm that the message push switch is enabled on the mobile app.  
2. Confirm that messages can be displayed normally in the mobile notification bar. Watch message push is achieved by reading messages from the mobile notification bar; If there is no message in the notification bar of the phone, the watch will not be able to receive push notifications.  
(You need to find the notification settings in your phone settings and turn on the notification switch for WeChat, QQ, Calling, and SMS mobile applications.)  
3. Open the auxiliary function settings of the wristband app. Find the auxiliary function in the phone settings and open the auxiliary function settings of the wristband app

**Apple phone settings:**  
1. Confirm that the message push switch is enabled on the mobile app.  
2. Confirm that the message can be displayed normally in the mobile notification bar (you need to find the notification settings in the mobile settings, turn on WeChat, QQ, Calling, SMS, and the notification switch on the mobile app)
